Reasons For Allowance

Claims 1 – 42 are allowable.

1. The following is an examiner's statement of reasons for allowance: A digital rate converter and method comprising: a second interpolator coupled to a selection circuitry, the selection circuitry providing values of a subset of buffer positions of the plurality of buffer positions to the second interpolator dependent on a position indicator, the second interpolator having a data output for providing a data output signal at a third sampling rate, the third sampling rate is based on a second clock signal, wherein the first clock signal and the second clock signal are independent of each other, wherein the output of the second interpolator provides an output value dependent upon a fractional indicator; and a digital sampling positioner, the digital sampling positioner including a first output for providing the position indicator and a second output for providing the fractional indicator..

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Conclusion

2. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.
3. Savell (US Patent Number 6,226,661) discloses a generation and application of sample rate conversion ratios using distributed jitter.

Art Unit: 2819

4. Spurbeck et al. (US Patent Number 5,909,332) discloses a sampled amplitude read channel employing interpolated timing recovery.
5. Genrich (US Patent Number 6,590,948) discloses a parallel asynchronous sample rate reducer.
6. Byrne et al. (US Patent Number 6,487,672) discloses a digital timing recovery using baud rate sampling.
7. Ashley et al. (US Patent Number 6,714,603) discloses an asynchronous timing for interpolated timing recovery.
